Mobile Computing

→ Access to information and services anytime, anywhere using mobile devices.
→ Enables continous connectivity and supports user mobility.

enables movement of users and devices.

requires lightweight and portable devices.

Mobility

→ Ability of users/devices to move while staying connected.
→ uses to communicate in diffrent locations.

works together to provide flexible and convenient access.

Portability

→ Ability to carry mobile devices easily
→ Devices are small light-weight and battery powered.

uses to communicate

wireless Communication

→ Transmits data without physical cables
→ Technologies: wifi - Bluetooth, (4G/5G).
→ provides connectivity for mobile devices over the air.

enables access everywhere.

ubiquitous computing

→ Availability of computing services everywhere in everyday life.
→ integrates mobile devices into the environment.
→ Enables continous connectivity context awareness and smart services.

together leads to anytime, anywhere computing.
